EXPERIENCE

AI Automation Intern January 2026 - February 2026

Solnix Media

- Automated lead generation by scraping LinkedIn and tech/news platforms for newly funded startups.
- Built data pipelines to collect and structure prospect data across industries.
- Identified high-value leads using funding signals and industry filters.
- Improved outreach efficiency through targeted, data-driven lead lists

EDUCATION

B.Sc in Data Science & Analytics, RA Podar College of Commerce and Economics, Matunga, *2027* **9.32**

B.Sc in Data Science, Smt. CHM College, Ulhasnagar, *2025* **9.68**

Class XII, Smt. CHM College, Ulhasnagar, *2023* **78%**

Class X, Lok Kalyan Public School, Kalyan, *2021* **88.40%**

PROJECTS

A Comparative Analysis of Fashion Trends in South Asian and Western Countries using CNN February 2026

- Built a Convolutional Neural Network (CNN) model using Python to classify and analyze fashion styles across South Asian and Western datasets.
- Collected and curated 2000+ images representing diverse clothing categories, enabling cross-cultural comparison of fashion trends.
- Performed image preprocessing and augmentation (resizing, normalization) to improve model generalization and robustness.
- Conducted comparative analysis to identify distinct visual patterns and cultural differences in clothing styles between regions.
- Visualized model outputs and trend insights to support data-driven understanding of global fashion patterns.

AI-Powered Student Performance Predictor August 2025

- Developed a machine learning model to predict student performance using Python and Scikit-learn.
- Performed data cleaning, feature selection, and exploratory data analysis (EDA) on academic datasets.
- Applied a regression algorithm and achieved **89% accuracy rate.**
- Built a simple interface using Streamlit to input student data and generate predictions.

InstaImpact: Analyzing Instagram's Content Effectiveness May 2025

- A data-driven analysis of Instagram content performance aimed at understanding what drives engagement.
- This project explores how post types, caption length, sentiment, and hashtags correlate with likes and audience response.
- Incorporated RoBERTa model for Natural Language Processing.

CERTIFICATIONS

Machine Learning: A-Z, Udemy 2025

100 Days of Code: Python, Udemy 2024

EXTRACURRICULAR ACTIVITIES/ ACHIEVEMENTS

Founder & Owner: Yarn N Hooked (Crochet Small Business) 2025

First Place: Reverse Code Competition 2025

Event Head (Critical Clash): Led a coding event for 10+ candidates, prepared questions on SQL, Python and DSA 2025

2nd Runner Up: Code Debugging and Code in the Dark Competition 2024

First Rank: F.Y. B.Sc. Data Science (Highest in 5+ subjects) 2024

SKILLS

Languages: Python, JavaScript, HTML, CSS

Data Science & Analytics: Data Analysis, Statistical Analysis, Hypothesis Testing, Data Cleaning, Exploratory Data Analysis (EDA)

Libraries & Tools: Pandas, NumPy, Matplotlib, Tensorflow

Web & Automation: Web Scraping, API Integration, Streamlit

Core Concepts: Data Structures & Algorithms (Basic), Object-Oriented Programming (OOP), Problem Solving

Other Skills: Research & Survey Design, Social Media Management, Fundraising Outreach
